

RIC Developer Workshop and Sponsor Meeting

Mark Kosten

THE ABSTRACT:

RIC (Research. Innovate. Collaborate.) is a virtual research environment built using Microsoft VRE Toolkit for Sharepoint. The application is an open source framework developed initially by the British Library and Microsoft Research, and now extended into the University sphere by various Universities around the world, including major developments at La Trobe University. This year La Trobe is sponsoring a developer workshop to plan new capabilities and a strategy for communal development. Microsoft will also describe how new features of Sharepoint, SQL Server and the cloud may influence future directions. Also, implementers of RIC will present case studies and user feedback in order to share experiences, solve problems and again influence the development.
